REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance: This application teaches a metal chelate of the formula

wherein R¹ and R² are each independently H or an organic group; M is a metal; p is 1 to 4; Y is an optionally substituted heterocyclic ring with a nitrogen ortho to the azo bridge; G is a substituent and n is 0 to 5, a composition comprising the above metal chelate compound and an ink jet ink comprising the above metal chelate compound. The closest prior art of record is U.S. Patent No. 5,330,542, issued to Maeda et al., which teaches a similar metal chelate compound of the formula

wherein A is a residue forming a hetero ring together with the carbon atom and the nitrogen atom to which it is bonded such as a quinoline ring which may be substituted with an acylamino group, a sulfonamide group or $-NR^9R^{10}$ wherein R^9 and R^{10} each independently represent H, an alkyl group having 1-25 carbon atoms which may have a substituent or a phenyl group which may have a substituent and R^9 and R^{10} may form a 5- or 6-membered ring together; B is a residue forming an aromatic ring or hetero ring together with the two carbons to which it is bonded such as a pyridine ring or a pyrazole ring wherein the ring may be substituted, X is a group having an active H and the metal is nickel, cobalt or copper but fails to teach or fairly suggest: (1) that the nitrogen atom in the quinoline ring is not ortho to the azo bond as claimed by applicants (i.e. ring A of Maeda et al. requires the nitrogen atom to be ortho to the azo group) or (2) that ring B can be a quinoline group of the formula as claimed by applicants. Accordingly, this application is allowable.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
